ENGINEERING EXPERIENCE

BetterHelp (Teladoc Health) Jul 2023 – Present

Software Engineer

- Owned web and backend implementation for Iterable push registration, connecting PHP authentication APIs, React/legacy WebViews, and iOS/Android bridges; coordinated cross-repository QA and release dependencies with mobile engineers and DevOps.
- Refactored subscription checkout into typed PHP pricing and experiment services, adding regression tests to preserve existing offers and payment behavior.
- Fixed duplicate late-cancellation charges affecting family accounts and corrected payment reconciliation for refunds and disputes.
- Cut session-comment database queries from five per session to five total through batch loading; expanded localized exports to include missing account and session records.
- Built experiment-driven insurance offers into the cancellation journey, connecting eligibility rules and backend allocation with localized interfaces and event tracking.
- Built accessible React onboarding dialogs and corrected scheduling announcements, improving keyboard navigation and screen-reader behavior.

InBalance · Eunoia Technologies 2024 – Present

Creator & Full-Stack Engineer · Independent Product

- Owned development and launch of a tax-planning app on the App Store and Google Play, using React Native, Go, and PostgreSQL to turn tax obligations into payment schedules and weekly funding plans.
- Designed versioned calculation snapshots and transactional payment records with idempotent operations to preserve history and prevent duplicate records during retries.
- Implemented Apple and Google sign-in, subscription entitlements, server-side verification of signed App Store transactions, deadline reminders, and payment-proof storage.

ADDITIONAL EXPERIENCE

App Academy Mar 2023 – Jul 2023

Software Engineering Assistant (Part-Time)

- Mentored full-stack learners through debugging and code reviews, explaining frontend and backend concepts and helping resolve implementation issues.

HyperStructure Media Oct 2022 – Jun 2023

Full-Stack Software Engineer

- Built a blockchain ledger prototype to support fundraising as one of two developers at a bootstrapped startup, working directly with the founder.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, Go, SQL, Python
Applications & data: React, Next.js, React Native, Node.js, MySQL, PostgreSQL, REST APIs
Engineering: Git, Docker, PHPUnit, Jest, JWT authentication, automated testing, accessibility

Earlier career: ABM Industries · Dispatch Supervisor | Mar 2017 – Jul 2021

EDUCATION

App Academy · Full-Stack Software Development Program | 2022
